

**Amendments to the Specification**

Please replace the paragraph at page 15, lines 19 through 23 with the following amended paragraph:

A ZIL-2 apparatus (Beijing Institute of Materia Medica) with ~~dimension~~ dimensions 60x60x12 cm was used. It consists of four circular plastic ~~boxed~~ boxes with diameter 25 cm and each has 6 equally distributed infrared photocells. The locomotor activity was counted automatically during a 5 minute period of test. An increase in the number of transitions reflects an increased locomotor activity.
